ARR-TECH.COM

MORE PRODUCTION. LESS LABOR

Designed to de-nest your product automatically, this system eliminates the need for manual labor by positioning the product into lanes to be transferred to automatic counting, stacking and packaging equipment. Features bi-directional product separation, variable-speed drive, and easy adjustability for your application needs. Ultra-quiet and extremely dependable, this Product Spreader Conveyor allows easy access for maintenance and utilizes current technologies for greater durability. Stainless steel, heavy-duty construction.

This system spreads the product from side to side and separates front to back while traveling the length of the conveyor.

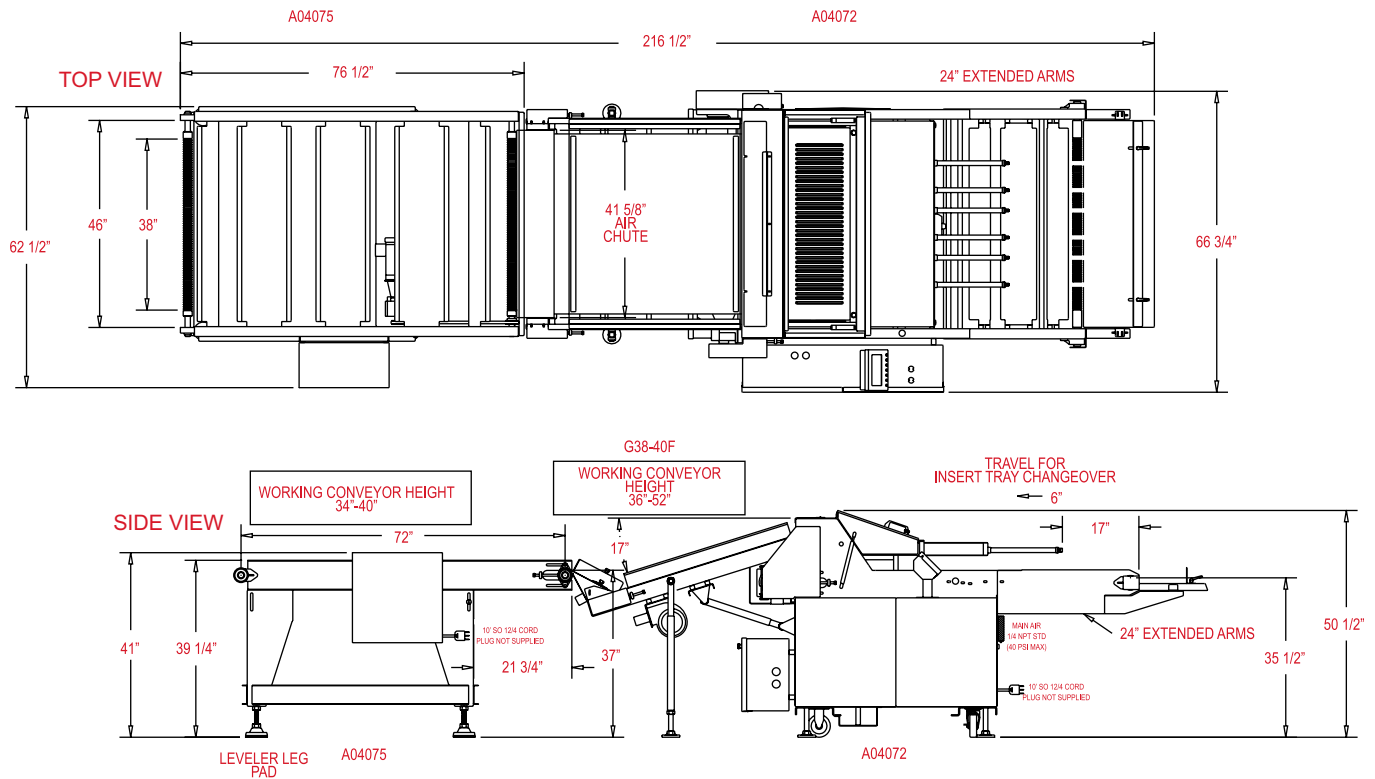

The synchronous drive gear belt reduces noise and vibration. No lubrication is required, and it eliminates problems associated with roller chain drive systems.

Simply arrange the belts in the grooves on the infeed and exit shafts into the position required to receive and discharge product for optimum performance.

Typical Layout For Spreader Belt System

Arr-Tech stands behind every piece of equipment with full remote or on-site maintenance support. We continually strive to enhance the performance of our machines by offering improved features.
